

displayed by said display means, said instructions relating to the orientation and formatting, including the sequence and number of images to appear on prints of album pages made after processing the film. Claims 1 and 8 are hereby amended to include the feature that the instructions include sequence and number of images per page instructions. Support for this amendment is found at page 14, lines 19 - 20 of the specification.

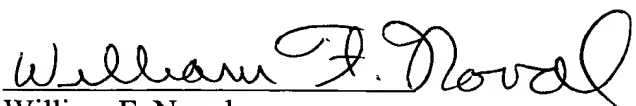

Levine discloses a camera that includes image capture means for simultaneously capturing at least one optical image onto a photographic film and an electronic imager; display means for displaying at least one image captured by said image capture means; and input means for selectively inputting instructions pertaining to the printing of selected frames as well as editing and otherwise changing the prints such as cropping, deleting, enlarging, or displacing a given frame (see col. 4, lines 63 - 65).

All of the printing examples given by Levine relate to the printing of individual frames. Levine does not show or suggest inputting information relating to the formation of an album page, particularly to the sequencing and number of images on an album page as disclosed and claimed by Applicants. None of the other prior art shows or suggests this feature. It is believed therefore that claims 1 and 8, as amended define patentable subject matter over Levine. The remainder of the claims are dependent from either claim 1 or 8 and are considered to be patentable for at least the same reasons.

It is believed that the claims in the application are allowable over the prior art and such allowance is respectfully requested.

The Commissioner is hereby authorized to charge any fees in connection with this communication to Eastman Kodak Company Deposit Account No. 05-0225. *A duplicate copy of this communication is enclosed.*

Respectfully submitted,
